## Natural durability and preservation

Resistance to fungi. Class 1 - very durable
Resistance to dry wood borers. Class D - durable (sapwood demarcated, risk limited to sapwood)
Resistance to termites. Class D - durable
Treatability. Class 3 - poorly permeable
Use class ensured by natural durability.
Class 4 - in ground or fresh water contact
Notes. This species is listed in the European standard NF EN 350 (2016). This species naturally covers the use class 5 (wood permanently or regularly submerged in salt water, sea water or brackish water) due to its high specific gravity and its hardness. According to the European standard NF EN 335 (2013), performance length might be modified by the intensity of end-use exposition.

## Requirement of a preservative treatment

Against dry wood borer. Does not require any preservative treatment
In case of temporary humidification. Does not require any preservative treatment In case of permanent humidification. Does not require any preservative treatment

## Drying

Drying rate. Slow
Risk of distorsion. High risk
Risk of casehardening. No known specific risk
Risk of checking. High risk
Risk of collapse. No known specific risk
Notes.
Suggested drying program.
