OVOGA

Family: RHIZOPHORACEAE (angiosperm)
Scientific name(s): Poga oleosa
Commercial restriction: no commercial restriction

WOOD DESCRIPTION

Color: pinkish white
Sapwood: clearly demarcated
Texture: coarse
Grain: straight
Interlocked grain: absent

LOG DESCRIPTION

Diameter: from 80 to 100 cm
Thickness of sapwood: from 2 to 5 cm
Floats: yes
Log durability: moderate (treatment recommended)

Note: Silver figure on quartersawn due to broad rays. Lustrous aspect. Grain sometimes slightly wavy.

PHYSICAL PROPERTIES

MECHANICAL AND ACOUSTIC PROPERTIES

Physical and mechanical properties are based on mature heartwood specimens. These properties can vary greatly depending on origin and growth conditions.

	Mean	Std dev.
Specific gravity *:	0,47	0,05
Monnin hardness *:	1,6	0,6
Coeff. of volumetric shrinkage:	0,45 %	0,09 %
Total tangential shrinkage (TS):	7,3 %	0,9 %
Total radial shrinkage (RS):	2,7 %	0,3 %
TS/RS ratio:	2,7	
Fiber saturation point:	33 %	

Stability: stable

	Mean	Std dev.
Crushing strength *:	38 MPa	2 MPa
Static bending strength *:	63 MPa	6 MPa
Modulus of elasticity *:	9320 MPa	1451 MPa

(*: at 12% moisture content, with 1 MPa = 1 N/mm²)

Musical quality factor: 114,5 measured at 2780 Hz

NATURAL DURABILITY AND TREATABILITY

Fungi and termite resistance refers to end-uses under temperate climate. Except for special comments on sapwood, natural durability is based on mature heartwood. Sapwood must always be considered as non-durable against wood degrading agents.
E.N. = Euro Norm

Funghi (according to E.N. standards): class 3 - moderately durable
Dry wood borers: durable - sapwood demarcated (risk limited to sapwood)
Termites (according to E.N. standards): class S - susceptible
Treatability (according to E.N. standards): class 1 - easily permeable
Use class ensured by natural durability: class 2 - inside or under cover (dampness possible)
Species covering the use class 5: No

REQUIREMENT OF A PRESERVATIVE TREATMENT

Against dry wood borer attacks: does not require any preservative treatment
In case of risk of temporary humidification: requires appropriate preservative treatment
In case of risk of permanent humidification: use not recommended

DRYING

Drying rate: rapid to normal

Risk of distortion: slight risk

Risk of casehardening: no

Risk of checking: slight risk

Risk of collapse: yes

Note: Tendency to distortion on backsawn. Drying rate between each board is highly variable.

Possible drying schedule: 2

M.C. (%)	Temperature (°C) dry-bulb	wet-bulb	Air humidity (%)
Green	50	47	84
40	50	45	75
30	55	47	67
20	70	55	47
15	75	58	44

This schedule is given for information only and is applicable to thickness lower or equal to 38 mm.
It must be used in compliance with the code of practice.
For thickness from 38 to 75 mm, the air relative humidity should be increased by 5 % at each step.
For thickness over 75 mm, a 10 % increase should be considered.

SAWING AND MACHINING

Blunting effect: normal

Sawteeth recommended: ordinary or alloy steel

Cutting tools: ordinary

Peeling: good

Slicing: nood

Note: Rays can make polishing difficult.

ASSEMBLING

Nailing / screwing: poor

Gluing: correct

COMMERCIAL GRADING

Appearance grading for sawn timbers: According to SATA grading rules (1996)
For the "General Purpose Market":
Possible grading for square edged timbers: choix I, choix II, choix III, choix IV
Possible grading for short length lumbers: choix I, choix II
Possible grading for short length rafters: choix I, choix II, choix III
For the "Special Market":
Possible grading for strips and small boards (ou battens): choix I, choix II, choix III
Possible grading for rafters: choix I, choix II, choix III

FIRE SAFETY

Conventional French grading: Thickness > 14 mm : M.3 (moderately inflammable)
Thickness < 14 mm : M.4 (easily inflammable)

Euroclasses grading: D s2 d0
Default grading for solid wood, according to requirements of European standard EN 14081-1 annex C (April 2009). It concerns structural graded timber in vertical uses with mean density upper 0.35 and thickness upper 22 mm.

END-USES

Veneer for interior of plywood
Current furniture or furniture components
Moulding
Glued laminated
Interior joinery
Blockboard
Veneer for back or face of plywood
Sliced veneer
Light carpentry
Formwork
Fiber or particle boards
Boxes and crates

Note: Filling is necessary in order to obtain a good finish.
